DETAILED ACTION

1. *Claims 1-13 are* allowed.

The following is an examiner's statement of reasons for allowance:

Regarding *claims 1 and 8*, The prior art of record considered alone or in combination neither anticipates nor renders obvious a communication method used when a mobile station receives a signal from a base station in a mobile communication system, comprising the steps of said mobile station deciding on one or a plurality of mobile stations which can communicate with said mobile station via one or a plurality of wireless networks that include said mobile station and said one or a plurality of mobile stations, and that do not include said base station. wherein said one or a plurality of mobile stations and; said one or a plurality of mobile stations sending a signal destined for said mobile station received from said base station to said mobile station via said predetermined wireless network; and said mobile station synthesizing a signal received from, said base station, and said signal destined, for said mobile station received from said one or a plurality of mobile stations.

The prior art of record provided numerous teachings of a communication method used when a mobile station receives a signal from a base station in a mobile communication system. However, the prior art of record failed to specifically disclose the steps of said mobile station deciding on one or a plurality of mobile stations which can communicate with said mobile station via one or a plurality of wireless networks that include said mobile station and said one or a plurality of mobile stations, and that do not include said base station. wherein said one or a plurality of mobile stations and; said one or a plurality of mobile stations sending a signal destined for said mobile station received from said base station to said mobile station via said

predetermined wireless network; and said mobile station synthesizing a signal received from, said base station, and said signal destined, for said mobile station received from said one or a plurality of mobile stations.
